### VICTORY SURE SAYS JOHNSON

SAN FRANCISCO, Cal., Oct. 14.—Ed Johnson to his departure for Chicago to begin his national campaign for Harding and Coolidge and against the Wilson league of nationalists. Senator Hiram W. Johnson issued the following statement here:  
"Since the campaign commenced, there has been no doubt about Senator Harding's position upon the issue of nationalists. Some interested parties for purposes of their own, have endeavored to misrepresent him. Yesterday, in language so plain that even they could not misunderstand it, Senator Harding stated again his opposition to the league.  
"I oppose the proposed league," he said, "not because I fail to understand what a former member of the democratic administration has said we are being let in for, but because I believe I understand precisely what we are being let in for. I do not want to clarify those obligations; I want to turn my back upon them. It is not interpretation, but rejection I am seeking."  
"Some time since I remarked that Senator Harding had scrapped the league. This was denied by some wobbly gentlemen and some left-handed newspapers. They may yet insist he has not 'scrapped' it; he has only turned his back upon its obligations and seeks its rejection. The senator's forthright stand upon this overshadowing issue has given him the enthusiasm in this campaign and will give him an overwhelming victory in November."  
Although it is not expected that Senator Johnson will return to California in time to participate in a San Francisco mass meeting, he will be here in time to vote. He said: "I will be back in time to vote for Samuel M. Shortridge and thus make his plurality 100,001 votes."

Cummings, organizer and manager of the company, asserts that there is 1,500,000 tons of ore already broken out for milling that will average \$10.45 per ton without any refractory elements to detract from a perfect cyaniding process to which the ore has proven amenable through tests conducted at various milling plants throughout the west. ture gave satisfactory returns running between 90 and 94 per cent of the assay value. The 100-ton mill at the mine will be used for sampling and development work and it is believed that at the end of two years the company will have enough ore broken out to justify the building of a mill at Silver Peak with a capacity of 250 tons daily. When that is done the mine will be connected with the mill by a railroad eight miles in length. For the small mill an extension of the power line will be built from Silver Peak and water will be drawn from Cottonwood spring by gravity. The faith of the organizers is based on the fact that the Nivloc group has a ledge that measures on the surface 250 feet in width which has been excavated for a distance of 127 feet at a depth of 65 feet without disclosing the hanging wall. The average values of \$10.45 represent sampling of the rock for a distance of 500 feet of development.
